Nethmi Heshani Tharuka

Nethmi Heshani Tharuka

300/4, Hewendeniya Gama, Pussellawa

PROFILE

Motivated Full Stack Developer with a strong foundation in computer science and hands-on experience in inquiry-based roles. Adept at both frontend and backend development, with a passion for building responsive, user-friendly, and efficient web applications. Possesses a keen analytical mindset and a problem-solving attitude, with the ability to adapt quickly to new technologies. Highly collaborative, detail-oriented, and committed to continuous learning and delivering high-quality solutions in dynamic environments.

EDUCATION

2023 - present

Bachelor of Computer Science (Undergraduate)

Eastern University of Sri Lanka

2021/22

G.C.E. A/L Examination - Physical Science

CP/KOT/ Delta Gemunupura Maha Vidyalaya

Combined Mathematics - C
Physics - C
Chemistry - C

EMPLOYMENT

Feb 2023 - July 2023

Inquiry Assistant

People's bank, Pussellawa

TECHNICAL SKILLS

- **Programming Languages:**
JavaScript, Java, Python, C++, PHP
- **Frontend Development:**
HTML, CSS, Tailwind CSS, React, Bootstrap, Sass, Figma
- **Backend Development:**
Node.js, Express.js, REST APIs, PHP
- **Databases:**
MongoDB, MySQL
- **Tools & Platforms:**
Git, Postman, Vite, Firebase
- **UI/UX Design:**
Figma

SOFT SKILLS

- Teamwork
- Leadership
- Critical Thinking
- Time management
- Effective Communication

PROJECTS

- **BudgetBee - Automated Expense Tracker Using Smart Receipt Recognition | React.js, Vite, Tailwind CSS, Node.js, Express.js, MySQL, Python, Tesseract OCR, Firebase, JWT, Recharts**

Developed a full-stack expense management web application that automates receipt digitization via a Python + Tesseract OCR microservice, extracting item-level financial data with auto-categorization using fuzzy matching, regex parsing, and hierarchical keyword logic. Built a React dashboard with real-time spending analytics, customizable budget alerts, and multi-period summaries visualized through Recharts. Secured with Firebase, JWT, and Bcrypt, with additional features including downloadable PDF reports, a financial diary, and email notifications via Nodemailer.

- **GrocyPro - Full-Stack POS & Inventory Management System | React, TypeScript, Vite, | Tailwind CSS, Node.js , Express , Firebase Firestore , Recharts , Netlify , Render**

Designed and deployed a full-stack grocery store management system handling inventory tracking, sales processing, and analytics reporting. Engineered a REST API backend with Node.js and Express, integrated Firebase Firestore for real-time data management, and built an interactive dashboard featuring visual sales trend charts, low-stock smart alerts, and a discount code engine. Deployed the frontend on Netlify and backend on Render, gaining hands-on experience with full-stack infrastructure, CI/CD, and production deployment challenges.

- **NeuroRelief Sri Lanka – Migraine Expert System | GNU Prolog, React.js, Logic Programming, Expert Systems**

Developed an AI-driven medical expert system for migraine diagnosis using GNU Prolog, featuring dynamic question generation based on user responses and a confidence-scored diagnostic engine. Built an accessible front-end interface that presents diagnosis results, confidence scores, and personalized recommendations covering medication, lifestyle, and dietary guidance — making clinical logic programming approachable for non-technical users.

- **Talko – Personal Virtual Assistant | React , Web Speech API , Gemini AI , JavaScript**

Developed a browser-based intelligent voice assistant that integrates real-time speech recognition, AI-generated responses, and speech synthesis to deliver a natural, conversational user experience. Implemented smart command handling for time, date, and automated browser actions, alongside custom branding logic and a responsive stop mechanism for full interaction control.

- **Snapchat UI/UX Redesign – HCI Exhibition Project | Figma**

Collaboratively redesigned Snapchat's user interface as part of an HCI course project at Trincomalee Campus, Eastern University of Sri Lanka. Focused on improving usability based on real user feedback and heuristic evaluation. Applied HCI principles to identify and resolve key UX issues, including icon clarity, onboarding, navigation, and accessibility. Created a high-fidelity prototype using Figma and presented the redesign at a university exhibition.

- **ChatChefs – AI-Powered Cooking Assistant | React.js, Tailwind CSS, Vite, Gemini API, Spoonacular API, Framer Motion , Web Speech API**

Built an AI-powered cooking assistant web app that generates ingredient-based recipe suggestions through natural conversation, developed as part of the Codedex June Challenge. Integrated Google Gemini API for intelligent ChefBot responses, Spoonacular and Edamam APIs for nutrition data and recipe alternatives, and Web Speech API for hands-free voice input. Delivered a responsive, mobile-friendly UI with smooth animations using Framer Motion and typewriter effects.
